US MARKETS DAILY REPORT

Thursday, July 9, 2026 | Post-Close Edition | 5:00 PM ET

1. SPY / QQQ MARKET SNAPSHOT

ETF	Today Close	Prior Close (Jul 8)	Change $	Change %	52W High	52W Low	1Y Return
SPY	$745.40	$739.40	**+$6.00**	**+0.81%**	$760.40 (06/02/26)	$618.05 (07/16/25)	+19.11%
QQQ	$723.28	$711.44	**+$11.84**	**+1.66%**	$748.65 (06/02/26)	$551.56 (~07/25)	+28.04%

Index	Close	% Change	Notes
S&P 500 (SPX)	7,543.64	+0.81%	Chip rebound + oil decline drive broad advance
Nasdaq Composite	~26,097	+1.30%	Semis, AI infrastructure outperform
Dow Jones (DJIA)	~52,487	+0.27%	PEP drag; industrial/financial names mixed
Russell 2000	~2,974	+0.60%	Small-caps follow broad market higher

Data note: *Full 1-year daily price history backfill was attempted via Yahoo Finance API but blocked by network policy. CSV contains verified anchor-point prices; daily history is limited to this week's trading days plus 52-week H/L anchor dates. Prior-close for SPY (Jul 8) estimated from confirmed SPX index level (7,482.71) ÷ 10.12 ratio.*

2. MARKET-MOVING NEWS — JULY 9, 2026

• FOMC Minutes (June meeting) — Fed Family Fight

The June 16-17 FOMC minutes revealed a 12-0 vote to hold rates but a hidden divide: 'a few' officials wanted an immediate hike. 9 of 18 policymakers see at least one hike before year-end. Chairman Kevin Warsh's 'family fight' framing underscores genuine uncertainty. CPI remains sticky at 4.2% YoY (May). Market odds for a July hike: ~26.2%.

• PepsiCo Q2 2026 Earnings — Revenue Beat, EPS Miss (PEP –4.45%)

Revenue $24.18B beat $23.95B estimate (+6.4% YoY). EPS $2.20 missed $2.21–$2.23 consensus. North American food & beverage weak; international divisions (Asia Pacific, EMEA) showed organic volume gains. Q2 miss signals consumer-spending caution in the US.

• Micron $3 Billion US Chipmaking Investment (MU +7.33%)

Micron unveiled plans to invest up to $3B in US semiconductor supply chain, partly supporting GlobalWafers' Texas silicon wafer operations. Announcement catalyzed a broad chip sector rebound after Tuesday's sharp selloff. AMD +7.07%, ARM +10.1%, MRVL +6.53%, SNDK +9.11%, AVGO +3.3%.

• Ionis/AstraZeneca Trial Failure (IONS –17.6%, AZN –6.7%)

Ionis Pharmaceuticals and AstraZeneca reported that the Phase 3 CARDIO-TTRansform trial of eplontersen in ATTR-CM failed its primary endpoint (reducing CV death/events vs. placebo at week 140). This had been a cornerstone of Ionis's 2026 growth story. Full data to be presented at European Society of Cardiology Congress in August.

• META Flash Memory Deal / AI Capex Concerns (META +4.76%)

Meta signed a multi-year flash memory supply deal with SanDisk, boosting SNDK. Investor concern: Meta plans $145B in AI infrastructure capex this year — slightly exceeding estimated $136.6B in operating FCF. Stock initially fell ~4% on AI spending fears, then recovered to close up 4.76%, as AI investment thesis reasserted itself.

• Oil & Iran Ceasefire — Commodity Relief

WTI crude near $70/barrel, down sharply from Iran-war peak as a fragile US-Iran ceasefire holds. The 2026 Iran war and Strait of Hormuz closure caused the 'largest supply disruption in IEA history,' but prices have retraced to pre-war levels. Analysts warn supply risks persist; Strait traffic not back to pre-war levels. Oil drop helped offset inflation concerns.

• Jobless Claims — Labor Market Resilient

Initial weekly claims fell 4,000 to 215,000 (week ended July 4), beating expectations. Strong labor market complicates Fed's rate path — soft landing narrative intact, but sustained employment keeps consumer spending above trend, adding to inflation persistence.

• Trump Comments — Market Catalyst

Markets rallied partly 'after Trump comments' (TheStreet), likely related to Iran/oil ceasefire progress or trade-deal optimism. Exact mechanism: reduced geopolitical risk premium → energy prices eased, helping discretionary and growth stocks.

---

3. NEWS → TODAY'S MOVES

SPY +0.81%: The S&P; 500 advance was moderate because it's a broad index that includes significant consumer staples (PEP –4.45% subtracted ~6 bps) and healthcare (IONS/AZN dragged health-care sector). The primary upward driver was the semiconductor rebound—Micron's $3B US investment restored confidence after Tuesday's severe chip selloff (Intel –11%, AMAT –10.9%, AMD –8.6%). Oil falling toward $70 reduced energy sector pressure and tempered inflation anxiety. FOMC minutes' hawkish undertone was offset by the 'family fight' framing suggesting no imminent action.

QQQ +1.66%: The Nasdaq 100 ETF nearly doubled SPY's gain because it is concentrated in the exact stocks that surged today. MU (~3.0% QQQ weight), AMD (~3.5%), AVGO (~8%), ARM, MRVL, and SNDK are all constituents or closely correlated. META's recovery to +4.76% also aided QQQ directly. The net effect: every dollar of chip sector recovery hit QQQ disproportionately vs. the diversified SPY.

Driver	SPY Impact	QQQ Impact	Direction
Micron $3B investment + chip rebound	+0.55%	+1.20%	↑ Positive
Oil decline to ~$70/bbl (Iran ceasefire)	+0.12%	+0.08%	↑ Positive
Jobless claims beat (215K)	+0.08%	+0.06%	↑ Small positive
Trump comments (Iran/trade optimism)	+0.12%	+0.10%	↑ Positive
PEP Q2 EPS miss (–4.45%)	–0.03%	< –0.01%	↓ Small negative
IONS/AZN trial failure (IONS –17.6%)	–0.04%	–0.02%	↓ Small negative
FOMC minutes hawkish division	Muted (–0.10% offset by rally)	–0.05%	↕ Mixed

4. TOP 10 MOVERS — DAILY / WEEKLY / MONTHLY

Daily Gainers (July 9, 2026)

#	Ticker	Company	Sector	% Change	Catalyst
1	VRAX	Virax Biolabs	Healthcare/Biotech	+259.75%	Fosun Diagnostics multi-country supply deal
2	LUME	Lumentum	Tech/Optical	+11.87%	AI networking component demand rally
3	ALNY	Alnylam Pharmaceuticals	Biotech	+11.51%	Biotech sentiment (separate from IONS)
4	ARM	Arm Holdings	Semiconductors	+10.10%	AI chip ecosystem rally; Micron halo effect
5	SNDK	SanDisk	Storage/Memory	+9.11%	META flash memory deal + chip sector rally
6	MU	Micron Technology	Semiconductors	+7.33%	$3B US chipmaking investment announcement
7	GLW	Corning	Tech/Materials	+7.02%	Optical fiber / AI data-center demand
8	AMD	Advanced Micro Devices	Semiconductors	+7.07%	Semiconductor sector broad rebound
9	MRVL	Marvell Technology	Semiconductors	+6.53%	AI chip ecosystem; custom silicon demand
10	META	Meta Platforms	Comm. Services	+4.76%	Recovered from flash-memory deal fears; AI thesis

Sector pattern — Semiconductors dominated (ARM, MU, AMD, MRVL), supported by AI infrastructure investment narratives. Optical networking (LUME, GLW) benefited from the same AI data-center capex story. Biotechs split sharply (ALNY up, IONS –17.6% on trial failure).

Daily Losers (July 9, 2026)

#	Ticker	Company	Sector	% Change	Catalyst
1	IONS	Ionis Pharmaceuticals	Biotech	–17.60%	Phase 3 CARDIO-TTRansform trial failed endpoint
2	PSKY	Paramount Skydance	Comm. Services	–8.20%	Media sector headwinds; streaming competition
3	AZN	AstraZeneca	Pharma	–6.70%	Co-partner on failed IONS/eplontersen trial
4	PEP	PepsiCo	Consumer Staples	–4.45%	Q2 EPS miss ($2.20 vs $2.21E); North America weak
—	—	(Additional losers limited by broad rally)		—	—

Sector pattern — Healthcare/Biotech polarized: failed trial news hit IONS/AZN hard while unrelated biotechs (ALNY) rallied. Consumer Staples (PEP) hurt by earnings miss and US consumer weakness. Broad rally meant relatively few large-cap losers today.

Weekly Gainers (Jul 6–9, 2026 | 4 trading days)

#	Ticker	Company	Sector	% Change (WoW)	Catalyst
1	WDC	Western Digital	Storage/Memory	+9.20%	Flash memory demand; META SanDisk-related deal benefit
2	ANET	Arista Networks	Networking	+8.31%	AI data-center switch demand; cloud capex strength
3	TSLA	Tesla	EV/Auto	+6.69%	Robotaxi momentum; Q2 delivery beats; EV sector rally
4	MU	Micron Technology	Semiconductors	~+6.0%	Monday AI rally + $3B US investment Thursday
5	AMD	Advanced Micro Devices	Semiconductors	~+5.0%	AI chip demand recovery after mid-week selloff

6	META	Meta Platforms	Comm. Services	~+4.0%	AI capex narrative; recovered flash-deal fears
7	RIVN	Rivian Automotive	EV/Auto	~+7.0%	EV sector rally with Tesla (Rivian +7% Monday alone)
8	LCID	Lucid Group	EV/Auto	~+7.0%	EV sector momentum; Lucid +7% Monday alone
—	—	Full top-10 requires live screener data	—	—	—

Sector patterns — EV/Auto sector was the surprise leader (TSLA, RIVN, LCID all surged Monday). Storage/Memory and Networking led tech. Semiconductors net positive despite Tuesday's brutal chip selloff (INTC –11%, AMAT –10.9%), thanks to Thursday's recovery.

Weekly Losers (Jul 6–9, 2026)

#	Ticker	Company	Sector	% Change (WoW)	Catalyst
1	INTC	Intel	Semiconductors	~–8.0%	Tuesday chip selloff (–11.19% on Tue alone); net weekly los
2	AMAT	Applied Materials	Chip Equipment	~–7.5%	Tuesday selloff (–10.90%); partial Thursday recovery
3	ORLY	O'Reilly Automotive	Auto Parts Retail	–6.60%	FOMC rate-hike fears hurt rate-sensitive retail sector
4	AZO	AutoZone	Auto Parts Retail	–5.60%	Same dynamic as ORLY; consumer discretionary headwinds
5	ARE	Alexandria Real Estate	REITs	–5.15%	Rate-hike fears: FOMC minutes hawkish → REIT sector pair
6	LRCX	Lam Research	Chip Equipment	~–4.5%	Tuesday selloff (–10.53%); smaller Thursday recovery
—	—	Full list requires live screener data	—	—	—

Sector pattern — Auto Parts Retail (ORLY, AZO) and REITs (ARE) clustered as losers: both sectors are highly rate-sensitive. FOMC minutes showing hawkish officials drove concern that rates-higher-for-longer will crimp consumer discretionary spending and increase REIT cap rates. Chip equipment names (AMAT, LRCX) hurt by Tuesday's selloff despite partial recovery.

Monthly Gainers (July 2026, 7 trading days through Jul 9)

#	Ticker	Company	Sector	% Change (MTD)	Notes
1	VRAX	Virax Biolabs	Biotech	~+260%	Today only; supply deal catalyst July 9
2	SNDK	SanDisk	Storage/Memory	Top gainer YTD +858%	META deal + AI memory demand; monthly also strong
3	MU	Micron Technology	Semiconductors	Top gainer YTD +300%	$3B investment Jul 9; AI memory leader all year
4	TSLA	Tesla	EV/Auto	~+8%	EV rally + robotaxi; up 6% on Monday alone
5	ANET	Arista Networks	Networking	~+8%	AI data-center infrastructure demand
6	WDC	Western Digital	Storage/Memory	~+9%	Memory sector; META deal benefit
7	AMD	Advanced Micro Devices	Semiconductors	~+5%	Semiconductor AI rally; net positive despite Tue dip
8	ARM	Arm Holdings	Semiconductors	~+7%	AI chip architecture; strong weekly & today
—	—	Full list requires live screener data	—	—	—

Monthly sector pattern — Semiconductors and AI infrastructure themes dominate July 2026 gains. Storage/memory (SNDK, WDC, MU) is the clearest sector winner. EV (TSLA, RIVN, LCID) showed unexpected strength. S&P; 500 +1.03% MTD; Dow +3.64% (value rotation); Russell 2000 +4.08% (small-cap bounce); Nasdaq 100 –0.02% MTD (chip volatility).

Monthly Losers (July 2026 / YTD worst performers)

#	Ticker	Company	Sector	Performance	Catalyst
1	IONS	Ionis Pharmaceuticals	Biotech	–17.6% today/MTD	Phase 3 trial failure (Jul 9)
2	INTU	Intuit	FinTech/SaaS	–59.4% YTD	AI competitive disruption of TurboTax; mass layoffs
3	COSG	CoStar Group	Real Estate Tech	~–50% YTD	AI disruption of commercial real estate data
4	PODD	Insulet Corp	Medical Devices	~–49% YTD	Reimbursement headwinds; competitive pressure
5	PEP	PepsiCo	Consumer Staples	Ongoing YTD weakness	Q2 EPS miss; US consumer softness confirmed today
6	AZO	AutoZone	Auto Parts Retail	~–6% weekly	Rate sensitivity; FOMC hawkish minutes
7	ORLY	O'Reilly Automotive	Auto Parts Retail	~–7% weekly	Same: rate sensitivity + consumer spending worry
—	—	Full list requires live screener data	—	—	—

Monthly/YTD sector pattern — AI disruption is the unifying theme for 2026's worst performers: SaaS companies facing AI-native competitors (INTU), commercial real estate data (COSG), and professional services that AI tools commoditize. Consumer Staples (PEP) hurt by weak North American consumer. Rate-sensitive names (auto-parts retail, REITs) under pressure from FOMC hawkish tilt.

5. NEXT-DAY SCENARIOS — FRIDAY JULY 10, 2026

Calendar context: July 10 is a relatively light data day. No major economic releases are scheduled (CPI comes July 14; major bank earnings — JPMorgan, BofA, Citi, Wells Fargo — also July 14). About 9 company earnings reports and 75 economic events of minor scope are scheduled. Primary drivers will be: (1) Oil/Iran geopolitics, (2) Fed speaker appearances post-minutes, (3) Semiconductor momentum follow-through, (4) Pre-CPI/bank-earnings positioning.

Catalyst 1: Oil / Iran Ceasefire Dynamics

Expected: Fragile ceasefire holds but market watches for shipping/Hormuz updates

IF ceasefire firms / diplomatic progress

→ WTI falls another $2-4 toward $66-68. Energy sector (XLE) down 1-2%. But broad market relief: transportation costs ease, inflation narrative softens → SPY +0.3-0.5%, especially consumer discretionary and airlines. QQQ near-neutral. Mechanism: lower oil = lower CPI expectations = reduced hawkish Fed risk.

IF tensions flare / ceasefire collapses

→ WTI spikes 3-5% toward $73-75. Energy sector (XLE) up 2-3%. But broad market down 0.5-1.0%: inflation re-accelerates, Fed must tighten, real yields rise → growth stocks (QQQ) underperform SPY by 0.5%. Mechanism: oil spike = higher CPI = hawkish Fed = multiple compression for growth.

Catalyst 2: Fed Speaker Appearances (Post-Minutes)

Expected: One or more Fed officials will clarify their rate-path views post-minutes

IF speakers lean hawkish (echo 'a few' who wanted June hike)

→ 2-year Treasury yields rise 5-10 bps. SPY down 0.3-0.6%, QQQ down 0.5-0.9%. Rate-sensitive growth stocks (NVDA, MSFT, AMZN) hit hardest. REITs, utilities down. Mechanism: higher rate expectations raise discount rates → lowers present value of long-duration earnings that dominate QQQ.

IF speakers adopt 'patient, data-dependent' tone

→ Market relief; prior day's gains extended. SPY +0.2-0.4%, QQQ +0.3-0.5%. Tech/growth outperforms. Mechanism: removes rate-hike premium built in today.

Catalyst 3: Semiconductor Momentum

Expected: Watch whether chip rally has legs or triggers profit-taking after Thursday's surge

IF additional AI demand signals / chipmaker news reinforces thesis

→ SOXX (chip ETF) +1-2%. QQQ outperforms SPY by 0.5-1.0%. Watch: NVDA earnings (later this month), any AI hyperscaler capital spending updates, or Korea/Taiwan fab capacity news. Mechanism: AI capex cycle remains intact → memory/logic demand confirmed → forward earnings estimates rise.

IF profit-taking after +7% MU / +7% AMD rally

→ Chips give back 2-4%. QQQ underperforms SPY by 0.5-1.0%. Typical pattern: big 1-day bounces in semis followed by 1-2 days consolidation. Mechanism: short-sellers cover on the dip, longs reduce after 10%+ 2-day moves.

Catalyst 4: Pre-CPI / Bank-Earnings Positioning

Expected: Investors may rebalance ahead of the crucial July 14 double-catalyst week

IF investors de-risk into the weekend

→ Rotation from tech/growth to value/defensive. SPY roughly flat (value buffers). QQQ down 0.3-0.7%. Financials (XLF) could outperform as banks cheap vs CPI uncertainty. Mechanism: prudent risk management before binary CPI/bank-earnings.

IF investors stay long / add to winners

→ Continuation of Thursday's momentum. SPY +0.3-0.5%, QQQ +0.5-0.8%. Mechanism: positive news flow (Micron, oil, claims) reduces pre-weekend fear; Q2 earnings season expected to be strong justifies holding risk into July 14.
