

US Markets Daily Report

Friday, July 10, 2026 · After Close

1. SPY / QQQ Snapshot

ETF	Today's Close	Daily Chg	Prev Close	1Y High	1Y Low	1Y Return
SPY	\$754.36	+0.80%	\$748.38	\$760.40	\$618.05	+19.11%
QQQ	\$734.65	+1.57%	\$723.28	\$748.65	\$551.56	+28.04%

Note: Full 1-year daily CSV backfill unavailable — Yahoo Finance and primary price APIs are blocked by session egress policy. 1Y High/Low/Return sourced from search-verified 52-week range data (Seeking Alpha / MacroTrends). CSV contains 2 confirmed trading days (Jul 9–10, 2026) derived from web searches.

2. Today's Market Context

Index / ETF	Close	Change	% Change
S&P 500 (cash)	7,543.64	+59.73	+0.80%
Nasdaq-100 / QQQ	~734.65	+11.37	+1.60%
Dow Jones	52,637.01	+149.60	+0.29%
SPY ETF	754.36	+5.98	+0.80%
Crude Oil (WTI)	71.59	−0.72	−1.00%

Sector performance (S&P; 500 sectors): **XLK Technology +1.2%**, **XLE Energy +1.8%** outperformed. Nine of eleven sectors ended lower: **XLB Materials −2.6%**, **XLF Financials −1.9%**, **XLY Consumer Discretionary −1.8%**. The index gain was entirely carried by tech and energy while breadth remained weak.

3. News → Today's Moves

SPY: +0.80% **QQQ: +1.57%** (QQQ outperformed because tech mega-caps and semiconductors dominated today's session.)

SK Hynix SKHY IPO Debut (+14–15.7%)

SK Hynix raised \$26.5 B in the largest-ever US foreign IPO, opening at \$170 vs. a \$149 IPO price. The debut electrified sentiment around AI-driven HBM memory demand, pulling NVDA, MU, and the broader semiconductor complex higher. Primary driver of QQQ outperforming SPY (+1.6% vs. +0.8%).

Meta Platforms +5.96% — Best Week Since Feb 2024

A BofA 'buy' reiteration paired with a Reuters-reviewed internal memo indicating Meta is materially reducing its AI inference cost structure drove the stock up ~6% today and ~15% for the week. META is a top-5 QQQ holding, adding meaningful index tailwind.

Nvidia +4%

The SK Hynix halo effect and continued AI capex optimism lifted NVDA, the largest single holding in QQQ. Each 1% NVDA move contributes roughly 8–10 bps to QQQ.

Lumentum LITE +11.1%

LITE surged on momentum from its record Q3 FY26 revenue (+90% YoY to \$808 M) and bullish Q4 guidance (\$960 M–\$1.01 B). The AI-driven surge in optical transceivers and silicon photonics for hyperscaler data centers continues to drive outsized growth.

Initial Jobless Claims 215K (est. 223K)

Fell 2K to 215K — a solid labor market reading that supports the soft-landing narrative and sustained consumer spending. Modestly positive for SPY; marginal.

Existing Home Sales Miss: 4.09 M vs. 4.19 M est.

A weak housing read signals elevated mortgage rates continue to constrain housing activity. Limited market impact today; absorbed without sustained selling pressure.

Iran Ceasefire Crumbles / Oil -1% to \$71.59

Despite renewed Iran tensions flagged earlier in the week (oil briefly touched \$78), oil pulled back 1% Friday as markets took a more sanguine view of near-term Hormuz disruption. Energy sector (XLE +1.8%) benefited from complexity — producers gain from elevated but not chaotic prices. APA (E&P;) fell 5% on fears diplomatic easing could erode oil's floor.

APA -5.0%, CrowdStrike -5.42%

APA sold off as oil retreated and sector rotation out of commodities accelerated. CrowdStrike decline likely reflects competitive pressure in the crowded endpoint-security space as AI-native security vendors gain traction; no major company-specific news confirmed.

4. Top Movers — Daily / Weekly / Monthly

Daily Movers (July 10, 2026)

▲ Daily Gainers

#	Ticker	Name	% Change	Sector / Driver
1	SKHY	SK Hynix ADR	+14.0–15.7%	Semiconductors — IPO debut, AI memory
2	LITE	Lumentum Holdings	+11.1%	Optical Networking — AI datacenter demand
3	META	Meta Platforms	+5.96%	Comm. Services — AI cost efficiency, India
4	NVDA	Nvidia Corp	+4.0%	Semiconductors — AI infrastructure
5	HPE	Hewlett Packard Ent.	+~2–3%*	IT Hardware — server/AI rack demand
6–10	—	Broad AI-tech basket	Mixed	FDXF, other S&P gainers (limited data)

▼ Daily Losers

#	Ticker	Name	% Change	Sector / Driver
1	CRWD	CrowdStrike	-5.42%	Cybersecurity — AI-native competitive pressure
2	APA	Apache Corp	-5.0%	Energy E&P — oil pullback, diplomatic easing
3	COST	Costco	~-2–3%*	Consumer Staples — rotation out of defensives
4	PSKY	(unknown)	neg.*	Insufficient data available
5–10	—	Materials/Fin. basket	-2–5%	XLB, XLF, XLY sector dragged multiples

* Approximate; exact price data unavailable from blocked sources.

Daily sector theme: Semiconductors and AI optical networking drove gains; energy E&P;, cybersecurity, and materials/consumer-discretionary rotated out. Only 2 of 11 S&P; sectors advanced — this is a concentrated rally, not broad market strength.

Weekly Movers (Week of July 7–10, 2026)

▲ Weekly Gainers

#	Ticker	Name	~Wk % Chg	Sector / Driver
1	META	Meta Platforms	+14–15%	Comm. Services — AI efficiency, India
2	SKHY	SK Hynix ADR	+14–16%	Semiconductors — IPO, HBM memory demand

3	LITE	Lumentum Holdings	+~10–12%	Optical Networking — AI datacenter
4	NVDA	Nvidia Corp	+~4–6%*	Semiconductors — continued AI tailwind
5–10	—	Other AI tech	Positive	Broad AI-adjacent tech benefited

▼ Weekly Losers

#	Ticker	Name	~Wk % Chg	Sector / Driver
1	SPCE/SpaceX	SpaceX	–6.83%	Aerospace — Nasdaq-100 inclusion selling
2	APA	Apache Corp	–5%+	Energy E&P — oil volatility, Iran drag
3	SMH/chips	Chip basket	Mixed-neg	Semis — Samsung miss early in week
4–10	—	Materials, Financials	Neg.	Rate sensitivity and sector rotation

Weekly sector theme (gainers): Communication Services and Semiconductors dominated on AI-spending optimism and the SK Hynix IPO. Meta's 15% weekly gain was the standout individual move. **Weekly sector theme (losers):** Aerospace (SpaceX inclusion selling), Energy E&P; (oil volatility from Iran situation), and chipmakers hit by Samsung's below-expectation earnings mid-week.

Monthly Movers — June 2026 (full month) / July MTD (7 trading days)

▲ Monthly Gainers (June 2026)

#	Ticker	Name	Mo % Chg	Sector / Driver
1	INHD	InHome Healthcare	+2,892%	Micro-cap healthcare — speculative move
2	CAST	Contra Fintech	+888%	Micro-cap fintech — speculative move
3	NVCT	Nuvectis Pharma	+179%	Biotech — clinical catalyst
4	RTB	RTB House	+165%	Ad-tech — AI advertising momentum
5	STI	Strategy Inc.	+150%	AI/data strategy — AI tailwind
6–10	—	AI/memory chip basket	Broad +	NVDA, MU, LITE — AI infrastructure

▼ Monthly Losers (June 2026)

#	Ticker	Name	Mo % Chg	Sector / Driver
1–5	—	AI-disrupted software	Neg.	Legacy SaaS disrupted by AI agents
6–10	—	Commodities/Metals	Neg.	Iran tension → risk premium fluctuation

Monthly sector themes: The outsized micro-cap gains (INHD, CAST) reflect speculative retail activity in low-float names and are NOT representative of sector health. Among large-caps: **AI infrastructure (semiconductors, optical networking, hyperscalers) is the single dominant long trend** across daily/weekly/monthly timeframes. The structural loser theme: **legacy software companies** whose pricing power is being eroded by AI coding assistants, AI agents, and model-native interfaces — a durable multi-month headwind.

5. Next Trading Day (Monday, July 13) — Scenario Trees

July 11 is Saturday; next session is Monday July 13. The week of July 13–17 is the most macro-dense of the summer: CPI, PPI, Retail Sales, Jobless Claims, Fed Chair Warsh testimony, Industrial Production, and the kick-off of Q2 earnings (major banks). Monday itself is event-light but enters with Iran/oil weekend headline risk.

Catalyst 1 — Iran / Oil Weekend Headlines (affects Monday open)

Context: The ceasefire has formally collapsed; Brent retreated to ~\$71–72 Friday as markets took a relatively calm view. The Strait of Hormuz remains in play. Any weekend attack on commercial shipping or escalatory rhetoric from Washington will spike oil.

↑ **Bullish scenario:** IF diplomatic progress emerges (bilateral statements, UN mediation) → oil falls toward \$68–70 → energy sector opens weaker but rate/inflation fears ease slightly → SPY +0.3–0.7%, QQQ +0.4–0.9%; the tech AI trade continues unimpeded.

↓ **Bearish scenario:** IF hostilities escalate (Hormuz attack, US airstrikes) → oil spikes to \$80+ → energy XLE surges 2–4%, but consumer/tech drag → SPY net –0.5–1.5%, QQQ –1–2% (growth stocks most rate/inflation-sensitive).

Catalyst 2 — US CPI (Tuesday, July 14, 8:30 AM ET) — The Week's Biggest Event

Context: May CPI ran at 4.2% headline / 2.9% core (war-related energy +24% YoY). Fed holds at 3.50–3.75%; July 29 FOMC has 25% probability of hike. A data surprise in either direction will move rates and equity multiples sharply.

↑ **Bullish scenario:** IF cooler than expected (core ≤2.6%, headline ≤3.8%) → 10-yr yield falls 10–15 bps → Fed hike probability drops to <10% → rate-sensitive tech re-rates higher → SPY +1.5–2.5%, QQQ +2–3.5% on release day. Mechanism: P/E expansion as discount rate falls; growth > value; NVDA, META, MSFT lead.

↓ **Bearish scenario:** IF hotter than expected (core ≥3.2%, headline ≥4.6%) → 10-yr yield spikes 15–20 bps → hike probability climbs to 40%+ → SPY –1.5–3%, QQQ –2–4%. Mechanism: P/E compression hits long-duration tech hardest. AI rally would face a serious confidence test.

Catalyst 3 — Fed Chair Warsh Testimony (Wednesday, July 15)

Context: Kevin Warsh testifies before Congress Wednesday. Markets will parse every word for signals on the July 29 FOMC. Warsh has historically leaned hawkish relative to committee consensus. Any remarks about persistent inflation could amplify CPI-day moves.

↑ **Bullish scenario:** IF Warsh expresses confidence that inflation is declining and signals the 'bar for hikes is high' → rate markets price out remaining 2026 hike → equity rally extends; SPY +0.5–1.5%, QQQ +1–2% on testimony day. Extra boost if he signals willingness to cut before year-end.

↓ **Bearish scenario:** IF Warsh stresses inflation is 'not yet beaten', doesn't rule out July hike → bond selloff intensifies, equity multiples compress → SPY –0.5–1.5%, QQQ –1–2.5%. Particularly damaging if it follows a hot CPI print Tuesday.

Catalyst 4 — Q2 Earnings Season Kickoff: Major Banks (Monday–Tuesday)

Context: JPMorgan, Wells Fargo, and Citigroup are expected to report early in the week. Bank earnings will signal: NII (net interest income) trajectory under current rates, loan growth, credit quality, and investment-banking revenue recovery.

↑ **Bullish scenario:** IF banks beat on NII and maintain/raise guidance → XLF (Financials, –1.9% today) rebounds sharply 2–4% → adds ~30–50 bps to SPY given XLF's ~13% index weight → SPY +0.5–1%. Confidence signal: economy absorbing higher rates without credit stress.

↓ **Bearish scenario:** IF banks miss on NII margin compression OR spike loan-loss reserves → XLF falls another 2–4% → SPY –0.3–0.8%. More importantly: signals the transmission of higher rates into the real economy is accelerating, raising recession risk premium.

6. Sources & Data Methodology

- Market index levels (S&P; 500, Nasdaq, Dow): Yahoo Finance / Zacks market wrap, July 10 2026
- SPY / QQQ prices: Derived from S&P; 500 index level (÷10 ratio) and Nasdaq-100 % change applied to Jul 9 QQQ close (\$723.28). Jul 9 QQQ close confirmed via TradingView / Investing.com search result snippets.
- 52-week range (SPY): Seeking Alpha / MacroTrends — High \$760.40 (Jun 2, 2026) / Low \$618.05 (Jul 16, 2025) / 1Y return +19.11%
- 52-week range (QQQ): Barchart / Invesco — High \$748.65 / Low \$551.56 / 1Y return +28.04%
- SK Hynix IPO: TechCrunch, Fast Company, Nasdaq Trader (NASDAQTRADER.COM), July 10 2026
- Meta weekly performance / BofA memo: CNBC, Benzinga, Yahoo Finance / TheStreet Jul 9-10 2026
- Jobless claims / existing home sales: Zacks market-news wrap July 10 2026
- Fed rate / inflation (CPI 4.2%): Intellectia.ai Fed analysis; Federal Reserve June 17 FOMC statement (federalreserve.gov)

- Iran / oil: Axios, Washington Post, CNBC, The Hill July 8-10 2026; WTI close \$71.59
- Daily movers (LITE +11.1%, APA -5%, CRWD -5.42%): Trefis S&P; 500 Movers article Jul 10 2026
- Monthly gainers (June 2026): StockTitan rankings (stocktitan.net)
- Week-ahead calendar: LiteFinance Economic Calendar Jul 13-19 2026; IG.com Week Ahead Jul 13

Data gap disclosure: Yahoo Finance direct access blocked by session egress policy (403 CONNECT rejected for fc.yahoo.com). Full 252-day historical CSV backfill not completed. All price-level data sourced from web search result snippets and cross-referenced where possible. Some intraday/exact closing figures are estimates within narrow bounds.
