

US Markets Daily Report

Date: 2026-06-30 (Q2 2026 Quarter-End) | **As of:** 4:00 PM ET (market close)

1. SPY / QQQ Snapshot

Ticker	Close	Chg (Day)	52-Wk High	52-Wk Low	1-Yr Return	CSV 1-Yr High	CSV 1-Yr Low
SPY	\$746.79	▲ 0.78%	\$760.40	\$591.89	▲ 19.95%	\$761.24	\$601.00
QQQ	\$732.49	▲ 1.16%	\$733.32	\$511.93	▲ 39.95%	\$745.34	\$548.50

52-wk stats and 1-yr return sourced from web searches. CSV 1-yr high/low computed from prices.csv (253 trading days, Jun 26 2025 – Jun 30 2026). Pre-Jun-26-2025 data: ~252-day interpolated backfill; last 4 rows confirmed from live web sources. Direct Yahoo Finance / yfinance download blocked (HTTP 403) — gap noted.

Broader indices close (June 30, 2026 — Q2 End): S&P 500 closes Q2 +13.5% (best quarter in 6 years) | Nasdaq also posts best quarter in 6 years | WTI Crude ~\$70/bbl (lowest since early March) | Tesla (TSLA) +8.5% | Alphabet (GOOGL) +5.0%

2. Today's Market-Moving News (June 30, 2026)

• Q2 2026 Quarter-End: Best Quarter in 6 Years

The S&P 500 closed Q2 2026 with a gain of approximately 13.5%, the highest quarterly return since Q4 2020. The Nasdaq posted a similarly strong quarter despite geopolitical headwinds from the US–Iran conflict that began in late February 2026. The AI capital-spending boom — led by hyperscalers (Amazon, Microsoft, Google, Meta) — overpowered the inflation and rate-hike fears triggered by higher oil prices. Today's session opened flat as institutional rebalancers and window-dressers set the tone early.

• JOLTS: May 2026 Job Openings Surge to 7.594M (vs. 7.30M Expected)

The Bureau of Labor Statistics reported May job openings rose 9,000 to 7.594 million, the highest since May 2024 and well above the 7.30M consensus forecast. Hires were steady at 5.2M; quits at 3.1M; layoffs at 1.7M. The surprisingly hot JOLTS print signals labor-market resilience but complicated the rate-cut narrative — a strong jobs market keeps the Fed in no-rush mode. The print was initially mildly negative for bonds but equities shrugged it off, focusing on the strong consumer-spending backdrop it implies.

• Tesla (TSLA) Surges 8.5% — Iran Peace Talks / Oil Crash

Tesla soared 8.5% to \$411.84 (from \$379.71 prior close), making it the session's standout large-cap mover. The catalyst: WTI crude fell more than 4% to ~\$70/bbl — its lowest since early March — after President Trump announced that the US would resume peace talks with Iran in Doha on Tuesday. Lower oil prices structurally benefit EVs (reduced gasoline competition, lower battery-input and logistics costs) and boosted Tesla's competitive positioning. TSLA's +8.5% added ~30bps to QQQ alone given its ~3.5% index weight.

• Alphabet (GOOGL) +5.0% — Second Day as Dow Component

Alphabet continued its Dow Jones inclusion rally, gaining 5% in its second session as a DJIA component (it replaced Verizon in the index). Alphabet's addition pushed the DJIA above key round levels and mechanically lifted DJIA-tracking ETFs. More fundamentally, the inclusion reflects Alphabet's dominant position in AI-powered advertising and Google Cloud. GOOGL's 5% gain added approximately 22bps to QQQ (a ~4.4% QQQ weight).

• **Amazon +3.2%, Meta +2.2%, Nvidia +1.3% — Mega-Cap Tech Broad Rally**

The remainder of the 'Magnificent 7' participated in the quarter-end tech rally. Amazon climbed 3.2% on continued AWS growth optimism and a favorable oil-price environment for logistics costs. Meta advanced 2.2% on AI ad-targeting strength. Nvidia gained 1.3%, continuing its leadership in data-center GPU chips. Collectively, these five names (TSLA, GOOGL, AMZN, META, NVDA) contributed approximately 1.3–1.5 percentage points to QQQ's daily gain.

• **Iran Peace Talks: Mixed Signals; WTI Crude Below \$70**

Trump said the US would meet with Iran in Doha on Tuesday. Iran's Foreign Ministry said no formal negotiations are scheduled, though an Iranian delegation is expected in Doha later this week. Despite the ambiguity, crude oil fell sharply on the implied de-escalation: WTI dropped to ~\$70/bbl, the lowest since early March 2026 (before the Iran conflict drove oil above \$100 briefly). Lower crude reduces inflation pressure, broadly supportive for equities and growth stocks.

• **Nike (NKE) Earnings After Bell: EPS Beat, Revenue Near Miss**

Nike reported Q4 FY2026 results: EPS \$0.72 vs. \$0.14 consensus (massive beat), but revenue was \$10.97B vs. \$11.1B expected (slight miss). The EPS beat was driven by cost-cutting and inventory discipline. Revenue weakness in North America and China persists. The report reflects Nike's ongoing turnaround effort but uncertainty around top-line recovery remains the key overhang.

• **Fed Outlook: Hawkish Hold; Warsh Signals Rate Hike Possible in 2026**

Following the June 17 FOMC meeting (rates held at 3.50–3.75%), new Fed Chair Kevin Warsh kept markets on alert with hawkish language. The CPI came in at 4.2% YoY in May 2026 — highest since April 2023 — driven by oil/energy pass-through from the Iran war. Nine FOMC members now signal at least one hike this year; six favor two quarter-point increases. The Fed's revised 2026 inflation outlook stands at 3.6% headline and 3.3% core. This hawkish overhang caps equity upside but was largely priced-in today.

• **Constellation Brands (STZ) — After-Bell Earnings Watch**

Constellation Brands was due to report Q1 FY2027 results after the close. Analysts expected revenue down ~10.5% YoY and EPS of \$3.21. The stock faced headwinds from US tariffs on Mexican goods (Corona, Modelo) and slowing beer consumption trends. Results were not yet available at market close.

3. News → Today's Moves

SPY: ▲ 0.78% (\$741.00 → \$746.79) | QQQ: ▲ 1.16% (\$724.08 → \$732.49)

Driver	Direction	SPY Impact	QQQ Impact	Mechanism
Iran peace talks / Oil -4%	++	~+0.3%	~+0.6%	Crude oil to \$70/bbl = lower inflation input, higher real consumer income → revenue
Tesla +8.5%	++	~+0.10%	~+0.30%	TSLA is ~1.4% of SPY, ~3.5% of QQQ. Oil-driven catalyst (EV vs. gasoline value
Alphabet (GOOGL) +5%	+	~+0.08%	~+0.22%	GOOGL is ~1.6% of SPY, ~4.4% of QQQ. Second-day Dow inclusion rally + AI se
Amazon +3.2%, Meta +2.2%		~+0.12%	~+0.29%	AMZN (~3.7% QQQ), META (~4.8% QQQ). AI hyperscaler narrative, lower oil for
JOLTS 7.594M (beat)	mixed	minimal	minimal	Strong labor market = consumer spending power (positive for revenue). BUT: red
Q2 end window-dressing+small		~+0.05%	~+0.05%	Fund managers top up outperforming tech names before quarter-end to show the
Hawkish Fed overhang (4.2% CPI)		-0.1%	-0.1%	Elevated inflation limits multiple expansion. Rate-hike probability (9 of 19 FOMC n

Summary: Today's ▲ 0.78% SPY and ▲ 1.16% QQQ were driven primarily by the Iran peace-talk signal that crashed crude oil 4%+ to \$70/bbl, directly lifting Tesla (+8.5%) and boosting broad growth-stock sentiment. QQQ outperformed SPY by ~38bps owing to its heavier concentration in mega-cap tech (Tesla, Alphabet, Amazon, Meta, Nvidia collectively contributing ~0.85–1.0pp to QQQ vs. ~0.30–0.40pp to SPY). Quarter-end window-dressing provided a modest mechanical tailwind. JOLTS strength was a mixed signal but net-positive framing dominated. The hawkish Fed/high-CPI overhang capped gains but did not reverse them.

4. Next-Day Scenarios — Wednesday July 1, 2026

Context: July 1 opens Q3 2026. New-quarter buying flows often continue the prior quarter's leaders for 3–5 sessions. The week's dominant risk is Thursday July 2 June Nonfarm Payrolls (released one day early due to Friday July 4 holiday). Iran peace-talk outcome in Doha on Tuesday (today) sets the overnight geopolitical tone.

1. ADP Private Payrolls — June 2026 (Wed Jul 1, ~8:15 AM ET)

Consensus: +118K private jobs (prior: +122K).

IF Beat (+140K or above): SPY +0.3–0.5%, QQQ +0.2–0.4%

Confirms labor-market resilience heading into official NFP Thursday. Soft-landing narrative reinforced. Growth/cyclical names lead. Risk: strong jobs = lower Fed cut probability → rates stay higher → mild multiple compression offset.

IF In-line (+110–130K): SPY ±0.1–0.2%, QQQ ±0.1%

Market shrugs; focus shifts entirely to Thursday NFP. No directional catalyst; low-volatility session expected.

IF Miss (below +90K): SPY –0.4–0.7%, QQQ –0.3–0.6%

Reignites slowdown/recession fears coming off hawkish Fed. Growth stocks (QQQ) vulnerable to 'stagflation' framing: weak growth + persistent inflation = worst-case scenario for P/E multiples. Bond yields fall (flight to safety), but equities drop more than they gain from rate relief.

2. ISM Manufacturing PMI — June 2026 (Wed Jul 1, ~10:00 AM ET)

Consensus: 53.8 (prior: 54.0). Above 50 = expansion.

IF Above 54 (expansion accelerates): SPY +0.2–0.4%, QQQ +0.1–0.2%; industrials and materials outperform

Manufacturing activity strong despite oil-price volatility from Iran war. Signals capital investment boom (AI data centers, onshoring) still intact. Mechanism: higher PMI → forward orders → corporate earnings upgrades.

IF 49–52 (deceleration or near-contraction): SPY –0.2–0.4%, QQQ –0.1–0.3%

Manufacturing contraction signal triggers growth-concern rotation. Industrials (XLI), materials (XLB) sell; bond proxies outperform. Amplified if ADP also misses — double-negative creates Thursday-payroll-preview anxiety.

3. Iran Peace Talks — Doha Meeting (Tuesday overnight / Wednesday AM)

US Envoy Witkoff en route to Doha; Iran's delegation expected later this week.

IF Formal ceasefire/deal announced: SPY +0.5–1.0%, QQQ +0.6–1.2%; oil –3% to –5%

Full geopolitical risk premium removal: oil falls further (sub-\$67?), inflation expectations drop sharply, Fed rate-hike probability drops. Growth stocks re-rate: lower discount rate directly inflates QQQ P/E multiples. Tesla, airlines, discretionary sector all rally further.

IF Talks collapse or no substantive progress: SPY –0.8–1.5%, QQQ –1.0–1.8%; oil +3–6%

Today's oil/geopolitical relief trade reverses. Oil spikes back above \$75; CPI 'last-mile' inflation concern re-emerges. Mechanism: Fed stays hawkish → rate hike repriced → rate-sensitive long-duration tech (QQQ) sold

more aggressively than broad market.

4. New-Quarter Institutional Inflows (Q3 2026 Start)

First trading day of Q3; pension, endowment, and retail flows typically redirect.

IF Tech/growth remains consensus overweight into Q3: SPY +0.2–0.4%, QQQ +0.3–0.6%; Mag-7 continue to lead

Fund managers entering Q3 with same overweight positioning as Q2, especially given AI capex cycle still early. Retail 401(k) rebalancing on July 1 = automatic monthly buy. Quarter-start momentum frequently carries Q2 winner sectors for ~5 sessions.

IF Value/defensive rotation (high-inflation / high-rate concern into Q3): SPY flat, QQQ –0.3–0.6%; energy, financials outperform growth

Some PMs may rotate from tech into value/energy given Warsh's hawkish stance, sticky CPI, and JOLTS strength. If crude stabilizes above \$70, energy (XLE) becomes an inflation hedge again. QQQ vulnerable if growth premium unwinds into a 'rates-stay-high' Q3 thesis.

5. Week-Ahead Calendar (Jul 1 – Jul 4, 2026)

Date	Event	Consensus / Prior / Notes
Wed Jul 1	ADP Private Payrolls — June 2026	Consensus: +118K Prior: +122K ~8:15 AM ET
Wed Jul 1	ISM Manufacturing PMI — June 2026	Consensus: 53.8 Prior: 54.0 ~10:00 AM ET
Wed Jul 1	EIA Crude Oil Inventories (weekly)	~10:30 AM ET — watch given oil market volatility
Wed Jul 1	Construction Spending — May 2026	~10:00 AM ET
Thu Jul 2	June Nonfarm Payrolls (EARLY release)	Consensus: ~110K Prior May: +172K 8:30 AM ET — KEY
Thu Jul 2	June Unemployment Rate	Consensus: ~4.1% Prior: 4.0%
Thu Jul 2	June Average Hourly Earnings	Wage inflation remains a Fed focus
Thu Jul 2	Initial Jobless Claims (weekly)	Continued claims also important
Fri Jul 3	US MARKETS CLOSED — Independence Day (observed)	

6. Data Sources & Notes

- **SPY** close \$746.79, prev close \$741.00 (Jun 29): sourced from web search (multiple aggregators citing Jun 30, 2026 quarter-end data).
- **QQQ** close \$732.49 (MarketBeat/Chameleon intraday/close data), prev close \$724.08 (Jun 29, multiple search sources).
- **52-wk stats**: SPY H \$760.40 (Jun 2 2026) / L \$591.89 (Jun 23 2025); QQQ H \$733.32 (May 27 2026) / L \$511.93 (May 30 2025) — from web search aggregators.
- **1-yr returns**: SPY +19.95% (price), QQQ +39.95% (TTM) — search-sourced.
- **prices.csv** (253 rows): historical backfill Jun 26 2025–Jun 26 2026 is an interpolated estimate (Yahoo Finance / yfinance blocked HTTP 403 by proxy). Last 4 rows (Jun 25–30 2026) confirmed from live web sources. Replace interpolated rows with official data via Tiingo/Polygon.io/brokerage API.
- **JOLTS May 2026**: 7.594M openings — BLS release sourced via CNN Business / search.
- **Tesla** close \$411.84 (+8.5%), **Alphabet** +5%, **Amazon** +3.2%, **Meta** +2.2%, **Nvidia** +1.3% — from search aggregators.
- **WTI Crude**: ~\$70/bbl — sourced from multiple search results.
- **ADP/ISM calendar**: from FXStreet economic calendar search.
- All analysis is read-only / observational. No trades placed or simulated.
