SPY +0.87% / QQQ +1.10% — Explanation

SPY: Semiconductor leadership (AMD, AVGO, INTC, MU, NVDA are large SPY components) plus financials (GS +2.9%) and industrials (BA +3.55%) drove gains. Consumer/healthcare (NKE, AMGN, MRK, DIS) partially offset. SPY still –1.3% below its Jun 3 all-time high of \$761.24.

QQQ: Outperformed SPY on the chip/AI day as expected — AMD, AVGO, NVDA, INTC are top QQQ holdings. SpaceX Nasdaq 100 inclusion tailwind also helped. QQQ is –3.4% below its Jun 2, 2026 peak of \$745.34. The QQQ/SPY outperformance gap (+0.23pp) reflects the Nasdaq 100's higher semiconductor weighting vs. the S&P; 500.

Catalyst 1: JOLTS Job Openings (May) — Jul 7, 10 AM

Forecast: 7.29M (−0.32M vs 7.61M prior). A softening labor market is disinflationary and reduces Fed hike pressure.

Scenario	Trigger	SPY Reaction	QQQ Reaction	Mechanism
DOVISH (Bull case)	JOLTS < 7.1M (Big miss)	+0.4%–0.7%	+0.5%–1.0%	Labor cooling → less wage pressure → Fed less likely to hike → 10yr yields drop →

HAWKISH (Bear case)	JOLTS > 7.5M (Big beat)	−0.5% to −0.8%	−0.7% to −1.2%	Hot labor = persistent wage inflation = Fed hike probability rises → rates spike → g

Catalyst 2: Fed's Christopher Waller Speech — Jul 7

Waller is a voting FOMC member. Markets parse his tone for clues on July 29–30 FOMC outcome.

Catalyst 3: SK Hynix Nasdaq Listing (Jul 10) — Building Hype

SKHY listing is the \$29.4B record ADR offering. Nasdaq 100 inclusion will force passive QQQ rebalancing.

Scenario	Trigger	Memory Sector	QQQ Impact	Mechanism
Strong Demand (Bull case)	Roadshow oversubscribed, price at top of range	MU, SNDK +1–3%	+0.3%–0.5%	Validates AI memory upcycle thesis. Passive fund pre-positioning for Nasdaq 100
Weak Demand (Bear case)	Pricing below range, order book thin	MU, SNDK −2%–5%	−0.5% to −1.0%	Signals AI memory demand narrative may be overstretched. Investors question the

Catalyst 4: FOMC Minutes (Jun 17) — Released Jul 8, But Positioning Starts Jul 7

Chair Warsh's first FOMC minutes. The dot plot showed nine officials backing a 2026 hike. Markets want to know the threshold conditions and dissent details.

Scenario	Minutes Tone	SPY React	QQQ React	Mechanism
Hawkish (Bear case)	Explicit hike triggers; strong inflation language	−1.0% to −1.5%	−1.5% to −2.5%	A 25bp hike fully priced compresses P/E multiples. High-multiple AI names in QQQ

Scenario	Minutes Tone	SPY React	QQQ React	Mechanism
Nuanced / Conditional	High bar for hike; disagreement noted	Flat to +0.5%	+0.5% to +1.0%	Relief: current rates may be sufficient → growth multiples stable. Chip stocks extend

Tomorrow's Playbook Summary:

- **Bull path:** JOLTS misses (< 7.1M) + Waller patient → QQQ +0.5–1.0%; semiconductors extend, bond yields fall. SK Hynix pre-listing demand validates memory thesis.
- **Bear path:** JOLTS beats (> 7.5M) + Waller hawkish → QQQ –1.0–1.5%; AMD gives back gains. FOMC minutes (Jul 8) then become the next key risk event.
- **Watch:** 10-yr Treasury yield (4.5% = key level), SKHY roadshow leaks, and any geopolitical headlines over the weekend that may carry into Jul 7 open.
