

US Markets Daily Report

July 14, 2026 | After-Close Edition

Data notes: SPY/QQQ prices between confirmed web-sourced anchor points are linearly interpolated (Yahoo Finance API unavailable). Confirmed closes: July 13 SPY=747.35, QQQ=711.74; July 14 SPY≈750.19 (+0.38% from S&P500);, QQQ≈719.60 (+1.10% from Nasdaq-100). Movers sourced from Trefis, Yahoo Finance, The Motley Fool, Bloomberg, Sunday Guardian Live.

1. SPY / QQQ Snapshot

Metric	SPY (S&P 500)	QQQ (Nasdaq-100)
Today's Close	\$750.19	\$719.60
Today's % Change	+0.38%	+1.10%
Prior Close (Jul 13)	\$747.35	\$711.74
1Y High	\$750.19	\$745.34
1Y Low	\$627.88	\$555.89
1Y Return (Jul 15 '25 – Jul 14 '26)	+18.9%	+29.5%

Broader Index Closes — July 14, 2026

Index	Close	% Change	Context
S&P 500	7,543.59	+0.38%	Reversed Monday slump; 4th best day of July
Nasdaq Composite	26,107.01	+0.90%	Tech/semis led; IBM drag offset by GS rally
Dow Jones	52,508.27	+0.02%	IBM -24.9% nearly wiped Goldman's +7.4% gain
SPY ETF	\$750.19	+0.38%	Tracks S&P 500; confirmed anchor
QQQ ETF	\$719.60	+1.10%	Tracks Nasdaq-100; est. from +1.1% Nasdaq-100

2. Today's Market-Moving News

1. CPI June 2026 — Softer Than Expected (KEY CATALYST)

Headline CPI rose 3.5% YoY in June (est. 3.8%), **fell 0.4% MoM** vs. -0.1% expected — the first material beat since April. Gasoline -9.7% MoM was the main driver. Fed-funds futures for a July hike collapsed from 42% → 17%; September hike probability now 60%. *Effect: Direct tailwind to both SPY and QQQ (+0.38% / +1.10%) as rate-sensitive tech and growth multiples expanded.*

2. Bank Earnings — Broad Beat (Q2 2026)

JPMorgan Chase (JPM) posted \$6.14 EPS vs. \$5.59 est. (+10% beat). Goldman Sachs (GS) crushed estimates — equities trading revenue blew past Street — shares +7.4%, saving the Dow from IBM drag. BofA (BAC) +2%, Citigroup, Wells Fargo also beat. Finance sector carried the S&P; 500 broad advance. *Effect: ~+0.30 pp contribution to S&P; 500 return; Dow barely positive (+9 pts) only because GS's 7.4% rise nearly offset IBM's 429-point drag.*

3. IBM Profit Warning — Worst Day in 39 Years (-24.9%)

IBM Q2 EPS \$2.93 vs. \$3.01 est.; Revenue \$17.2B vs. \$17.86B est. CEO Arvind Krishna cited enterprise clients *stocking up on hardware ahead of tariff price hikes* and pivoting capex toward AI infrastructure, away from traditional software/mainframes. IBM fell 24.9%, its worst single-day move since 1987. *Effect: –429 pts Dow drag (but Dow still +9 pts net due to GS); minimal S&P;/Nasdaq impact as IBM weight in S&P; 500 is small (~0.4%).*

4. Semiconductor Stocks Rally

Memory giants SK Hynix and Samsung lifted Micron (MU) and other US chip names. Lam Research (LRCX) +4.25%, AMD +3.83%. The AI-infra demand narrative proved resilient despite IBM's warning about hardware spending shifts. Phil Semiconductor Index (SOX) up ~2%. *Effect: Primary driver of QQQ outperformance (+1.10%) over SPY (+0.38%).*

5. US–Iran Geopolitical Tensions

Reports of escalating US–Iran friction sent crude oil +2%; Energy Select Sector (XLE) +3.2%, extending its record 14-week sector winning streak. Oil refiners (VLO, MPC, PBF) continued their banner year (up 80–120% YTD). Gold/silver pulled back as risk assets rallied. *Effect: Energy helped SPY but weighed on cost-sensitive consumer and industrial names.*

6. Fed Chair Warsh Rate-Hike Signal (Pre-market)

Ahead of his Senate Banking Committee testimony (scheduled July 15), Bloomberg reported Warsh signaled residual willingness to hike if inflation re-accelerates. This set a slightly nervous pre-open tone that reversed sharply once CPI printed soft. *Effect: Pre-market futures were flat/negative; soft CPI unwound hawkish pricing and catalyzed the day's rally.*

3. Top 10 Movers — Daily / Weekly / Monthly

Daily Movers — July 14, 2026

#	Ticker	Name	% Change	Key Reason
↑1	GS	Goldman Sachs	+7.4%	Q2 earnings blow-out; equities trading surge
↑2	MS	Morgan Stanley	+4.6%	Pre-earnings run; expected Q2 beat (reports 7/15)
↑3	LRCX	Lam Research	+4.3%	Semiconductor rally; memory capex outlook improved
↑4	AMD	Advanced Micro Devices	+3.8%	Chip names rallied on soft CPI / Nasdaq-100 bid
↑5	JPM	JPMorgan Chase	+2.0%	Q2 EPS \$6.14 vs \$5.59 est; IB & trading strong
↓1	IBM	Intl Business Machines	–24.9%	Q2 miss + profit warning; worst day since 1987
↓2	APP	AppLovin Corp	–12.7%	Persistent selling; adtech competitive concerns
↓3	SYK	Stryker	–5.6%	Healthcare/MedTech profit-taking amid rate reprieve
↓4	ADBE	Adobe	–4.0%	Software names sold; rotation to financials/chips
↓5	ORCL	Oracle	–~3%	Ongoing monthly pressure (–34% mtd); sellers active

Daily Sector Trend: Financials dominated gains (GS, MS, JPM, BAC — Q2 beat wave). Semiconductors second (LRCX, AMD, MU). Losers were idiosyncratic: IBM (earnings miss), AppLovin (adtech), healthcare (SYK), software (ADBE, ORCL).

Weekly Movers — Week of July 7–14, 2026

#	Ticker	Name	Est. % Chg	Driver
---	--------	------	------------	--------

↑1	GS	Goldman Sachs	+~8%	Q2 earnings beat surprise
↑2	VLO	Valero Energy	+~6%	Crude +2%, refiner margins; XLE 14-wk streak
↑3	MPC	Marathon Petroleum	+~5%	Same refiner tailwinds; diesel/jet fuel margins
↑4	LRCX	Lam Research	+~5%	Memory capex cycle re-acceleration
↑5	JPM	JPMorgan Chase	+~4%	Q2 earnings beat; IB activity strong
↓1	IBM	Intl Business Machines	~-25%	Profit warning; worst week in decades
↓2	ORCL	Oracle	~-5%	Continued June sell-off bleed; capex concerns
↓3	APP	AppLovin Corp	~-13%	Adtech pressure; multi-day slide
↓4	ON	ON Semiconductor	~-4%	Auto-semi slowdown; industrial demand weak
↓5	MRVL	Marvell Technology	~-4%	Custom chip optimism fades vs commodity semis

Weekly Sector Trend: Financials (earnings) and Energy (crude/geopolitics) led gains. Legacy software (IBM, Oracle) and adtech (APP) led losses. Semiconductors were mixed — memory/DRAM-exposed names up, auto/industrial exposed names down.

Monthly Movers — ~30 Days Ending July 14, 2026

#	Ticker	Name	Est. % Chg	Driver
↑1	PBF	PBF Energy	+~25%	YTD +123%; Iran risk + refiner margins surge
↑2	DK	Delek Group	+~20%	YTD +103%; refinery cycle + M&A speculation
↑3	MPC	Marathon Petroleum	+~15%	YTD +86%; crude tailwinds + buybacks
↑4	VLO	Valero Energy	+~14%	YTD +83%; diesel margin expansion
↑5	GS	Goldman Sachs	+~12%	Trading revenue surge; Q2 earnings catalyst
↓1	ORCL	Oracle	-34.4%	AI capex cash burn (-\$23.7B FCF); worst mo since 1990
↓2	ON	ON Semiconductor	-18.0%	Auto-semi inventory correction; EV demand slowdown
↓3	APP	AppLovin Corp	~-15%	Adtech competitive pressure; growth multiple reset
↓4	SNDK	SanDisk (WD)	~-10%	NAND oversupply concerns; margin compression
↓5	IBM	Intl Business Machines	~-25%	Profit warning July 14; enterprise IT spend shift

Monthly Sector Trend: Energy / Oil Refiners dominating gains — Iran risk premium, refinery margins, European/Asian alternative supply demand. **Financials** benefitting from AI-driven capital markets activity. **Losers:** Legacy enterprise software (Oracle — AI capex negative FCF), auto-semis (ON), adtech (APP). Persistent IBM weakness culminated in July 14 crash.

4. Next-Day Catalysts & Scenario Trees — July 15, 2026

Catalyst A: PPI (June) — 8:30 AM ET

June CPI just printed soft (-0.4% MoM). PPI is the producer-side read; it leads future consumer inflation and informs Fed policy credibility.

• **IF PPI soft (MoM ≤ 0.0%, YoY ≤ 2.8%) →**

SPY/QQQ likely +0.5–1.0%. Confirms the disinflationary trend. Fed July hike odds fall further (below 15%). Rate-sensitive tech (QQQ) outperforms. Mechanism: lower rates → higher DCF valuations for growth; banks reprice duration assets up.

• **IF PPI hot (MoM ≥ +0.3%, YoY ≥ 3.2%) →**

SPY/QQQ likely -0.5–1.5%. Contradicts CPI softness — signals pipeline inflation. July hike odds spike back to 30%+. Growth/tech (QQQ) hit hardest via rate repricing. Energy/commodities may catch a bid as input-cost inflation re-appears. Mechanism: higher rates → multiple compression in long-duration assets.

Catalyst B: Fed Chair Warsh Senate Banking Testimony — 10 AM ET

Warsh was reported pre-market to signal willingness to hike. After today's soft CPI, he may soften or he may reinforce the hawkish bias. Markets will parse every word.

- **IF Warsh pivots dovish / acknowledges CPI progress →**

SPY/QQQ rally continuation +0.3–0.8%. July hike risk further reduced. Tech/QQQ outperforms. Bank stocks may give back some gains on lower-for-longer rates. Mechanism: credibility of the July pause + no Sep commitment → risk appetite maintained.

- **IF Warsh remains hawkish (September hike imminent, data-dependent but leaning toward hike) →**

SPY/QQQ sell off -0.5–1.2%. Reprices September probability to 70%+. QQQ more impacted than SPY (tech valuations more duration-sensitive). Financials may actually BENEFIT (steeper yield curve → better NIM). Mechanism: higher terminal rate → lower bond prices → tech multiple compression.

Catalyst C: ASML Q2 Earnings (Pre-market)

ASML is the sole supplier of EUV lithography tools — the 'picks and shovels' of the semiconductor AI buildout. Consensus: EPS \$7.95, Rev \$10.29B. Its guidance is a leading indicator for the entire chip ecosystem (NVDA, LRCX, AMAT, MU, AMD).

- **IF ASML beats and raises guidance →**

Semiconductor complex (SOX) up 2–4%. QQQ outperforms SPY by 0.5–1.0 pp. LRCX, AMAT, KLAC, NVDA, AMD all catch a bid. Mechanism: EUV demand = AI chip supply buildout on track → validates multi-year capex cycle.

- **IF ASML misses or guides down (especially on China export controls impact) →**

SOX down 2–4%; QQQ underperforms SPY by 0.5–1.5 pp. Semiconductor supply concerns ripple through — NVDA, AMD, MU sell off. Mechanism: EUV shortage → chip production bottleneck narrative → growth concerns.

Catalyst D: Morgan Stanley Q2 Earnings (Pre-market)

MS pre-ran +4.6% today on expectation of a strong Q2. Consensus: EPS \$2.93, Rev \$19.62B. Wealth management and M&A; advisory are the key watches.

- **IF MS beats (especially wealth mgmt AUM fees + IB revenue) →**

Financial sector +0.5–1.0%. Confirms the GS/JPM trend — strong quarter for Wall Street. SPY gains 0.2–0.4 pp from financials contribution (sector ~13% weight). Mechanism: strong asset mgmt + IB fee income → sustained earnings growth in financials.

- **IF MS misses (wealth mgmt outflows or weaker IB) →**

Reversal of today's +4.6% pre-run; MS -4–8%. Financial sector gives back yesterday's gains. SPY slight drag. Mechanism: investor reassessment of bank earnings quality — if GS was an outlier, multiples get reset lower.
